## Product Description

A one-piece slow jigging rod called "THE JOKER" - The world's first rod with a unique Joker design. We present to you a unique series, the "Joker". An iconic and awesome design was designed into the rod with incredible power from HDCC3 technology. This is a limited edition of only 1000 pieces. Each reed has a unique serial number registered to DC Comics. A collection of reeds you should never miss! HDCC3 technology on the reed HDCC stands for High Density Carbon Composite. It is not solid carbon, as many may think of our HDCC material. It is patented packaged technology invented by BULLZEN. The rod consists of a 4-axis cross carbon taper design of carbon that eliminates vacuum rotation and enhances overall structural stability, giving these rods incredible strength and performance in combat with a max drag of 30 pounds. Equipped with a SEA GUIDE base, including SEA GUIDE guides with titanium ring that are optimally positioned to maintain the integrity of the reed, making "The Joker" rods the ultimate rods created to tackle the most demanding and powerful fish. A long and comfortable handle was designed for the fishing rod, which does not tire during long fishing sessions. The cork handles use a high-density EVA foam material that has a lower shock absorption capacity, making them better able to transmit vibrations. With THE JOKER brand on the handle.

Model Number	Power Type	Action	Length (feet)	Pieces	Lure weight	No. Guide	Weight	Drag Max
