## Product Description

Eastern Hunter HYDRA is the ultimate quality yarn for Ultra-Light to Medium Light fishing, developed with one purpose only: smoothness and durability. Made using the finest materials from Japan, Hydra's braids are thinner and more durable than other braids in the same class. Following the success of its predecessor, Eastern Hunter Power Braids, the Hydra range went through a series of tests and various field trials before its final production and introduction to the market. Designed specifically for saltwater (inshore) fishing, the Hydra Series braid is more durable, smoother and emits less noise when casting. Made with 8 Expectra yarns, the Hydra Series is so thin that no one will believe it's actually eight yarns knitted tightly together. One of the highest quality yarns on the market at the best price! NOTE: Hydra Gen2 yarn is bright green with white markings (1m per point).

Specifications: With incredibly thin cross sections

Effectivity - October 2023

**EHX8 HYDRA Series**

Item	Length	LBS	Size	Diam	KG	Color
