Product Description

Grab the Crab! is an artificial bait for rockfishing and light game that imitates a crab, a popular bait on our shores and a staple in the diet of many fish. Let's look at some of the features that make it special:

- **Body:** It has a flat body with a central thickness for better hook retention.
- **Legs:** It has three pairs of rear legs. The last pair has a small vertical wing that mimics the legs of a crab, adding movement through water resistance.
- **Danganes:** Its calipers combine additional movement by design and maximum response to the slightest shake. They end in a small caliper to be realistic.
- **Eyes:** It has two eyes that protrude from the body, which focus the bite marks.

This lure offers a lot of action and is ideal for fun fishing.

Presentation

Pack of 8 pieces.

Usage Tips

Grab the Crab! is suitable for rockfishing and light game and can be used in many ways and with different weights. You can use it with a jighead (we prefer round heads) or a cheburashka and move it easily.

- **Weights:** can be used with relatively heavy weights, as the movement is based on calipers.
- **Techniques:** It accepts various techniques such as twitching, darting, and continuous retrieve, although we recommend fishing it slowly for best results.

Similar to the Bentos, users fishing by boat can take full advantage of it for stream fishing.
